# Deep Learning is Trending!

Google Trends : **Deep Learning**

- Branch of machine learning based on modeling high level abstractions in data
- Uses multiple processing layers with complex structures (non-linear transformations)
- Learning hierarchy of concepts

# Deep Learning Winning Prediction Competitions!

## Deep Learning Wins Dogs vs Cats competition on Kaggle

A Deep learning expert wins Kaggle Dogs vs Cats image competition with an almost perfect result.

Yann LeCun, a leading researcher on Deep Learning, who was recently [hired by Facebook to head their AI Lab](#), reports that his former student [+Pierre Sermanet](#) won the [Dogs vs Cats competition](#) on Kaggle.

Pierre entry was amazingly good - 98.9% correct. He [posted on Google+](#)

I just won the Dogs vs. Cats Kaggle competition, using the deep learning library I wrote during my PhD: [OverFeat](#)

## Kaggle's Dogs vs. Cats Competition

### How bio-inspired deep learning keeps winning competitions

An interview with Dr. Juergen Schmidhuber on the future of neural networks

November 28, 2012 by Amara D. Angelica, Jürgen Schmidhuber

Dr. Jürgen Schmidhuber is Director of the Swiss Artificial Intelligence Lab, IDSIA. His research team's artificial neural networks (NNs) have won many international awards, and recently were the first to achieve human-competitive performance on various benchmark data sets.

AA: In several contests and machine-learning benchmarks, your team's NNs are now outperforming all other known methods. As The New York Times noted Friday, last year, a program your team created won a pattern recognition contest by outperforming both competing software systems and a human expert in identifying images in a database of German traffic signs.

The German Traffic Sign Benchmark (credit: Institut für Neuroinformatik, Bochum)

"The winning program accurately identified 99.46 percent of the images in a set of 50,000; the top score in a group of 32 human participants was 99.22 percent, and the average for the humans was 98.84 percent," the Times pointed out. Impressive. What is the importance of traffic sign recognition in this field?

## IJCNN 2011 (Traffic Sign Recognition)

## Deep Learning Wins 2012 Brain Image Segmentation Contest

(first Deep Learner to win a pure image segmentation competition)

[Jürgen Schmidhuber](#)

Our [Deep Learning Neural Networks](#) (deep NN) won the ISBI'12 Challenge on segmenting neuronal structures [2], through the work of Dan Claudiu Ciresan and Alessandro Giusti - see recent NIPS paper [1].

To our knowledge, this was the first image segmentation competition (with secret test set) won by a feedforward Deep Learner. (It should be mentioned, however, that our [LSTM RNN](#) already performed *simultaneous segmentation and recognition* when they became the [first Deep Learners to win official international pattern recognition contests](#) - in connected handwriting at ICDAR 2009 [13].)

## Deep Learning Successes Obtained by IDSIA

IDSIA is one of the largest and oldest lab that focuses on deep learning. Their machine learning team is being led by Jürgen Schmidhuber. In the last 5 years, they had several successes on different machine learning competitions. Here are some of their recent competitive achievements in competitions and challenges:

- 22 Sept 2013: Deep neural network of the Swiss AI Lab IDSIA wins MICCAI 2013 Grand Challenge on Mitosis Detection (important for cancer prognosis etc). For more information: <http://www.idisia.ch/~juergen/deeplearningwinsMICCAIgrandchallenge.html>
- 1 Sept 2013: Deep neural network of the Swiss AI Lab IDSIA is the best artificial offline recogniser of Chinese characters from the ICDAR 2013 competition (3755 classes), approaching human performance. For more information: <http://arxiv.org/abs/1309.0261>
- 2012: Deep neural network of the Swiss AI Lab IDSIA wins brain image segmentation contest (relevant for the huge brain projects in EU and US). More information: <http://www.idisia.ch/~juergen/deeplearningwinsbraincontest.html>

# Convolutional Neural Networks

- Feed-forward back-propagation neural networks
- Inspired by biological processes
- Widely used for image and video recognition and NLP tasks
- Requires relatively little pre-processing (learns filters “**on its own**”!)

Biological Neuron

Input

Weights

$x_1$   
 $x_2$   
 $x_3$   
 $\vdots$   
 $x_d$

$w_1$

$w_2$

$w_3$

$w_d$

Output:  $\sigma(w \cdot x + b)$

Sigmoid function:

$$\sigma(t) = \frac{1}{1 + e^{-t}}$$
